

# Built For Opportunity

United Prairie  
Chrisman, Ill.

## 5 REASONS TO LOVE THIS FACILITY

**1 RECENTLY A CORN FIELD**  
This site was first established in 2021 with an office, chemical storage, shop, anhydrous depot and a 1-million-gal. UAN tank. United Prairie has since expanded with a 3,500-ton Stueve dry fertilizer warehouse.

**2 EXPANDED SERVICE**  
The greenfield location greatly expands the United Prairie service area to the southeast.

**3 BUILT TO LAST**  
The team at United Prairie had worked with Stueve at its Tolono, Ill., headquarters, and selected the building design for its longevity. In all, nine employees work out of this facility.

**4 THE FUTURE IN MIND**  
As a new facility in a newer geography, the company intentionally built this warehouse with the ability to be expanded as needed in the future.

**5 THE FLEET**  
Tenders used to hub fertilizer from 50 minutes away. Now, three pieces of application equipment, one custom application ammonia tractor, four semi dry tender trucks, one tandem liquid/dry tender, and four semi tankers are out of this location.

### INBOUND PRODUCT

The AGI truck receiving equipment is rated at 200 tons per hour.

### FLEXIBLE PRODUCT STORAGE

There are six marco bins allocated for a variety of dry products plus micronutrient push up bins. The flexibility allows the team to store its heavily used products such as MAP and potash, but also have room for products gaining in volume such as ammonium sulfate and urea.

### VERTICAL BLENDING

Due to a strong working relationship with other equipment, United Prairie selected a Doyle vertical blend for this facility.

### TENDER TO THE FIELD

The blending system is paired with a single unload conveyor, also from Doyle, which has an exterior single lane truck load out.

### STRATEGIC SITE FOR GROWTH

The other building on site is adjacent to the 1-million-gal. UAN tank which is also matched with four, 30,000-gal. liquid fertilizer tanks. Inside, there are eight 5,000-gal. chemical tanks. Two bays for liquid blend loading are fully automated with an AGI system. The chemical storage and office building is 72' wide with a 60' long shop, 80' long chemical storage section, 80' of cold storage and an office measuring 37'x44'.
